## **Foglight Performance Analysis for Oracle Micro Workshop (Use Oriented 1:1)**

The FPAO Use-Oriented workshop is specifically geared toward the DBA who either has not used FPAO before, or needs a brief refresher to achieve maximum value in minimal time. We leverage our FPAO expert along with our state-of-the-art lab to show real-world use cases and how FPAO can quickly assist the DBA in identifying and responding to performance problems as they happen and/or when they occurred previously.

The workshop is conducted in a “hands-on” one-on-one fashion and is interactive in nature. At the end of the workshop, the DBA will have a firm understanding of how to use FPAO. In cases where the client currently has a FPAO installation, we can (if requested) login to the environment and give a high-level assessment of the installation health.

### **Approach & Activities**

The consultant will contact the client DBA to arrange a time for the Workshop to begin (NOTE: 5 business days notice are needed to reschedule).

#### Interview Goals for FPAO

- To fully understand exactly what the current use challenges and/or goals are for FPAO.

#### "Hands-On" One-On-One Use-Oriented Review

- The DBA will login to our state-of-the-art simulation lab to examine real-world use cases with FPAO.
- During the review, the DBA will be shown how the tool can make recommendations for real-time problems or those that already occurred (i.e. when most of us were sleeping).
- The FPAO expert will show the power of intelli-profile, advisories and several other key features.
- The review will be interactive in nature and, as time permits, the DBA may have a chance to “drive” through some of the use cases.

## Time Allocation

- Interview: 30 minutes
- Use-Oriented Review: 3.5 hours
  - If desired, this can include a Webex login to the client's environment so that we can assess the current installation and make recommendations as needed.
  - During this time, the instructor will demonstrate how to use FPAO as efficiently as possible and then give control to the student to allow for "hands-on" learning.

## **What's New in Foglight Performance Analysis on Oracle?**

### **Some of the newer Performance Analysis features include the following:**

- **IntelliProfile:** Dynamically analyzes performance metrics and produces an expected baseline.
- **Advisories:** Performance, Best Practices
- **Historical Lock Analysis:** DBA's review historical blocking lock scenarios to identify root causes.
- **Dimension Filters:** Supports complex expression filters.
- **Integration with Knowledge Expert:** Comprehensive reference for administrators or programmers.
- **Scalability Test** (Benchmark Factory integration): Send groups of SQL to BMF for scalability tests.

**The total cost of this Micro Offering is \$750 US**
